MIS 2022-0134

PATIENT'S NAME: VAIBHAV KUMAR	AGE/SEX: 1Y2M/M
REF. BY: AIIMS	REG./UID: VAR0256
TEST NAME: 3T MRI SCAN - CEMRI HEAD & ORBITS	EXAM. DATE: 22-DEC-2025

CONTRAST MRI BRAIN WITH ORBIT

TECHNIQUE:

MRI of the brain and orbits was performed with standard sequences in axial, coronal, and sagittal planes before and after intravenous contrast administration (4 ml). No contrast reaction is noted.

Clinical Details: Known case of bilateral retinoblastoma.

FINDINGS:

Orbits:

Left Eyeball: There is evidence of a heterogeneously enhancing altered signal intensity lesion measuring 20 x 14 mm in the posterior chamber of the left eyeball, showing internal foci of calcification. No evidence of extraocular extension. No involvement of the left optic nerve.

Right Eyeball: There is a heterogeneously enhancing plaque-like altered signal intensity lesion measuring approximately 6 x 3 mm in the temporal region of the posterior chamber of the right eyeball. No evidence of extraocular extension. No involvement of the right optic nerve.

Optic Nerves: No abnormal thickening or enhancement of the bilateral optic nerves. No intraorbital or intracanalicular extension seen.

Extraocular Muscles: Appear normal bilaterally.

Retrobulbar Fat: Preserved bilaterally.

Lacrimal Glands: Appear normal bilaterally.

Orbital Walls: Appear intact bilaterally.

Sinuses: Clear.

Brain Parenchyma:

No focal lesions or abnormal signal intensities are seen in the cerebral hemispheres, brainstem, or cerebellum. No evidence of leptomeningeal enhancement. Ventricular system is normal in size and configuration. No evidence of hydrocephalus. Basal ganglia, thalami, and internal capsules are unremarkable.

Sellar and Parasellar Region:

Pituitary gland and stalk are normal in size and signal. No abnormal enhancement or mass lesion.

Brainstem and Cerebellum:

Normal in morphology and signal intensity. No abnormal enhancement.

Cerebrospinal Fluid Spaces:

Basal cisterns and cortical sulci are within normal limits for age. No evidence of abnormal extra-axial collections.

Disclaimer: It is an interpretation of medical imaging/diagnostic based on clinical data. All modern machines/procedures have their own limitation. This is neither complete nor accurate; hence, findings should always be interpreted in the light of clinico-pathological correlation. This is a professional opinion, not a diagnosis. Not meant for medico legal purposes. Any typographical error should be informed and report sent for correction within 7 days.

PATIENT'S NAME: VAIBHAV KUMAR	AGE/SEX: 1Y2M/M
REF. BY: AIIMS	REG./UID: VAR0256
TEST NAME: 3T MRI SCAN - CEMRI HEAD & ORBITS	EXAM. DATE: 22-DEC-2025

Major Vessels:

Major intracranial vessels appear normal in course and caliber. No abnormal flow voids or vascular malformations seen.

Other Incidental Findings:

No other significant abnormalities detected.

IMPRESSION:

- Heterogeneously enhancing altered signal intensity lesion measuring 20 x 14 mm with internal foci of calcification in the posterior chamber of the left eyeball, without extraocular or optic nerve extension, likely retinoblastoma.
- Heterogeneously enhancing plaque-like altered signal intensity lesion measuring approximately 6 x 3 mm in the temporal region of the posterior chamber of the right eyeball, without extraocular or optic nerve extension, likely retinoblastoma.
- No evidence of intracranial extension or associated brain parenchymal abnormality.

ADVICE: CLINICAL CORRELATION.
